

## Debian Reference

# Debian Reference

**Osamu Aoki**

Copyright © 2013 Osamu Aoki

This Debian Reference (v2) (2014-12-03 15:28:23 UTC) is intended to provide a broad overview of the Debian system as a post-installation user's guide. It covers many aspects of system administration through shell-command examples for non-developers.

### Abstract

This book is free; you may redistribute it and/or modify it under the terms of the GNU General Public License of any version compliant to the Debian Free Software Guidelines (DFSG).

### Table of Contents

#### Preface

- 1. Disclaimer
- 2. What is Debian
- 3. About this document
  - 3.1. Guiding rules
  - 3.2. Prerequisites
  - 3.3. Conventions
  - 3.4. The popcon
  - 3.5. The package size
  - 3.6. Bug reports on this document
- 4. Some quotes for new users
- 1. GNU/Linux tutorials
  - 1.1. Console basics
    - 1.1.1. The shell prompt
    - 1.1.2. The shell prompt under X

- 1.1.3. The root account
- 1.1.4. The root shell prompt
- 1.1.5. GUI system administration tools
- 1.1.6. Virtual consoles
- 1.1.7. How to leave the command prompt
- 1.1.8. How to shutdown the system
- 1.1.9. Recovering a sane console
- 1.1.10. Additional package suggestions for the newbie
- 1.1.11. An extra user account
- 1.1.12. sudo configuration
- 1.1.13. Play time
- 1.2. Unix-like filesystem
  - 1.2.1. Unix file basics
  - 1.2.2. Filesystem internals
  - 1.2.3. Filesystem permissions
  - 1.2.4. Control of permissions for newly created files: umask
  - 1.2.5. Permissions for groups of users (group)
  - 1.2.6. Timestamps
  - 1.2.7. Links
  - 1.2.8. Named pipes (FIFOs)
  - 1.2.9. Sockets
  - 1.2.10. Device files
  - 1.2.11. Special device files
  - 1.2.12. procfs and sysfs
  - 1.2.13. tmpfs
- 1.3. Midnight Commander (MC)
  - 1.3.1. Customization of MC
  - 1.3.2. Starting MC
  - 1.3.3. File manager in MC
  - 1.3.4. Command-line tricks in MC
  - 1.3.5. The internal editor in MC
  - 1.3.6. The internal viewer in MC
  - 1.3.7. Auto-start features of MC
  - 1.3.8. FTP virtual filesystem of MC
- 1.4. The basic Unix-like work environment
  - 1.4.1. The login shell
  - 1.4.2. Customizing bash
  - 1.4.3. Special key strokes
  - 1.4.4. Unix style mouse operations
  - 1.4.5. The pager
  - 1.4.6. The text editor
  - 1.4.7. Setting a default text editor
  - 1.4.8. Customizing vim
  - 1.4.9. Recording the shell activities

- 1.4.10. Basic Unix commands
- 1.5. The simple shell command
  - 1.5.1. Command execution and environment variable
  - 1.5.2. The "**\$LANG**" variable
  - 1.5.3. The "**\$PATH**" variable
  - 1.5.4. The "**\$HOME**" variable
  - 1.5.5. Command line options
  - 1.5.6. Shell glob
  - 1.5.7. Return value of the command
  - 1.5.8. Typical command sequences and shell redirection
  - 1.5.9. Command alias
- 1.6. Unix-like text processing
  - 1.6.1. Unix text tools
  - 1.6.2. Regular expressions
  - 1.6.3. Replacement expressions
  - 1.6.4. Global substitution with regular expressions
  - 1.6.5. Extracting data from text file table
  - 1.6.6. Script snippets for piping commands
- 2. Debian package management
  - 2.1. Debian package management prerequisites
    - 2.1.1. Package configuration
    - 2.1.2. Basic precautions
    - 2.1.3. Life with eternal upgrades
    - 2.1.4. Debian archive basics
    - 2.1.5. Debian is 100% free software
    - 2.1.6. Package dependencies
    - 2.1.7. The event flow of the package management
    - 2.1.8. First response to package management troubles
  - 2.2. Basic package management operations
    - 2.2.1. **apt-get** / **apt-cache** vs. **aptitude**
    - 2.2.2. Basic package management operations with the commandline
    - 2.2.3. Interactive use of aptitude
    - 2.2.4. Key bindings of aptitude
    - 2.2.5. Package views under aptitude
    - 2.2.6. Search method options with aptitude
    - 2.2.7. The aptitude regex formula
    - 2.2.8. Dependency resolution of aptitude
    - 2.2.9. Package activity logs
  - 2.3. Examples of aptitude operations
    - 2.3.1. Listing packages with regex matching on package names
    - 2.3.2. Browsing with the regex matching

- 2.3.3. Purging removed packages for good
- 2.3.4. Tidying auto/manual install status
- 2.3.5. System wide upgrade
- 2.4. Advanced package management operations
  - 2.4.1. Advanced package management operations with commandline
  - 2.4.2. Verification of installed package files
  - 2.4.3. Safeguarding for package problems
  - 2.4.4. Searching on the package meta data
- 2.5. Debian package management internals
  - 2.5.1. Archive meta data
  - 2.5.2. Top level "Release" file and authenticity
  - 2.5.3. Archive level "Release" files
  - 2.5.4. Fetching of the meta data for the package
  - 2.5.5. The package state for APT
  - 2.5.6. The package state for aptitude
  - 2.5.7. Local copies of the fetched packages
  - 2.5.8. Debian package file names
  - 2.5.9. The dpkg command
  - 2.5.10. The update-alternatives command
  - 2.5.11. The dpkg-statoverride command
  - 2.5.12. The dpkg-divert command
- 2.6. Recovery from a broken system
  - 2.6.1. Incompatibility with old user configuration
  - 2.6.2. Different packages with overlapped files
  - 2.6.3. Fixing broken package script
  - 2.6.4. Rescue with the dpkg command
  - 2.6.5. Recovering package selection data
- 2.7. Tips for the package management
  - 2.7.1. How to pick Debian packages
  - 2.7.2. Packages from mixed source of archives
  - 2.7.3. Tweaking candidate version
  - 2.7.4. Updates and Backports
  - 2.7.5. Blocking packages installed by "Recommends"
  - 2.7.6. Tracking **testing** with some packages from **unstable**
  - 2.7.7. Tracking **unstable** with some packages from **experimental**
  - 2.7.8. Automatic download and upgrade of packages
  - 2.7.9. Limiting download bandwidth for APT
  - 2.7.10. Emergency downgrading
  - 2.7.11. Who uploaded the package?
  - 2.7.12. The equivs package
  - 2.7.13. Porting a package to the stable system
  - 2.7.14. Proxy server for APT

- 2.7.15. Small public package archive
- 2.7.16. Recording and copying system configuration
- 2.7.17. Converting or installing an alien binary package
- 2.7.18. Extracting package without dpkg
- 2.7.19. More readings for the package management
- 3. The system initialization
  - 3.1. An overview of the boot strap process
    - 3.1.1. Stage 1: the BIOS
    - 3.1.2. Stage 2: the boot loader
    - 3.1.3. Stage 3: the mini-Debian system
    - 3.1.4. Stage 4: the normal Debian system
  - 3.2. SysV-style init
    - 3.2.1. The meaning of the runlevel
    - 3.2.2. The configuration of the runlevel
    - 3.2.3. The runlevel management example
    - 3.2.4. The default parameter for each init script
    - 3.2.5. The hostname
    - 3.2.6. The filesystem
    - 3.2.7. Network interface initialization
    - 3.2.8. Network service initialization
    - 3.2.9. The system message
    - 3.2.10. The kernel message
  - 3.3. The udev system
    - 3.3.1. The kernel module initialization
- 4. Authentication
  - 4.1. Normal Unix authentication
  - 4.2. Managing account and password information
  - 4.3. Good password
  - 4.4. Creating encrypted password
  - 4.5. PAM and NSS
    - 4.5.1. Configuration files accessed by PAM and NSS
    - 4.5.2. The modern centralized system management
    - 4.5.3. "Why GNU su does not support the wheel group"
    - 4.5.4. Stricter password rule
  - 4.6. Other access controls
    - 4.6.1. sudo
    - 4.6.2. PolicyKit
    - 4.6.3. SELinux
    - 4.6.4. Restricting access to some server services
  - 4.7. Security of authentication
    - 4.7.1. Secure password on the Internet
    - 4.7.2. Secure Shell
    - 4.7.3. Extra security measures for the Internet
    - 4.7.4. Securing the root password

## 5. Network setup

- 5.1. The basic network infrastructure
  - 5.1.1. The hostname resolution
  - 5.1.2. The network interface name
  - 5.1.3. The network address range for the LAN
  - 5.1.4. The network device support
- 5.2. The modern network configuration for desktop
  - 5.2.1. GUI network configuration tools
- 5.3. The legacy network connection and configuration
- 5.4. The network connection method (legacy)
  - 5.4.1. The DHCP connection with the Ethernet
  - 5.4.2. The static IP connection with the Ethernet
  - 5.4.3. The PPP connection with pppconfig
  - 5.4.4. The alternative PPP connection with wvdialconf
  - 5.4.5. The PPPoE connection with pppoeconf
- 5.5. The basic network configuration with ifupdown (legacy)
  - 5.5.1. The command syntax simplified
  - 5.5.2. The basic syntax of `"/etc/network/interfaces"`
  - 5.5.3. The loopback network interface
  - 5.5.4. The network interface served by the DHCP
  - 5.5.5. The network interface with the static IP
  - 5.5.6. The basics of wireless LAN interface
  - 5.5.7. The wireless LAN interface with WPA/WPA2
  - 5.5.8. The wireless LAN interface with WEP
  - 5.5.9. The PPP connection
  - 5.5.10. The alternative PPP connection
  - 5.5.11. The PPPoE connection
  - 5.5.12. The network configuration state of ifupdown
  - 5.5.13. The basic network reconfiguration
  - 5.5.14. The ifupdown-extra package
- 5.6. The advanced network configuration with ifupdown (legacy)
  - 5.6.1. The ifplugd package
  - 5.6.2. The ifmetric package
  - 5.6.3. The virtual interface
  - 5.6.4. The advanced command syntax
  - 5.6.5. The mapping stanza
  - 5.6.6. The manually switchable network configuration
  - 5.6.7. Scripting with the ifupdown system
  - 5.6.8. Mapping with guessnet
- 5.7. The low level network configuration
  - 5.7.1. Iproute2 commands
  - 5.7.2. Safe low level network operations

- 5.8. Network optimization
  - 5.8.1. Finding optimal MTU
  - 5.8.2. Setting MTU
  - 5.8.3. WAN TCP optimization
- 5.9. Netfilter infrastructure
- 6. Network applications
  - 6.1. Web browsers
    - 6.1.1. Browser configuration
  - 6.2. The mail system
    - 6.2.1. Email basics
    - 6.2.2. Modern mail service basics
    - 6.2.3. The mail configuration strategy for workstation
  - 6.3. Mail transport agent (MTA)
    - 6.3.1. The configuration of exim4
    - 6.3.2. The configuration of postfix with SASL
    - 6.3.3. The mail address configuration
    - 6.3.4. Basic MTA operations
  - 6.4. Mail user agent (MUA)
    - 6.4.1. Basic MUA — Mutt
  - 6.5. The remote mail retrieval and forward utility
    - 6.5.1. getmail configuration
    - 6.5.2. fetchmail configuration
  - 6.6. Mail delivery agent (MDA) with filter
    - 6.6.1. maildrop configuration
    - 6.6.2. procmail configuration
    - 6.6.3. Redeliver mbox contents
  - 6.7. POP3/IMAP4 server
  - 6.8. The print server and utilities
  - 6.9. The remote access server and utilities (SSH)
    - 6.9.1. Basics of SSH
    - 6.9.2. Port forwarding for SMTP/POP3 tunneling
    - 6.9.3. Connecting without remote passwords
    - 6.9.4. Dealing with alien SSH clients
    - 6.9.5. Setting up ssh-agent
    - 6.9.6. How to shutdown the remote system on SSH
    - 6.9.7. Troubleshooting SSH
  - 6.10. Other network application servers
  - 6.11. Other network application clients
  - 6.12. The diagnosis of the system daemons
- 7. The X Window System
  - 7.1. Key packages
  - 7.2. Setting up desktop environment
    - 7.2.1. Debian menu
    - 7.2.2. Freedesktop.org menu
    - 7.2.3. Debian menu from Freedesktop.org menu

- 7.3. The server/client relationship
- 7.4. The X server
  - 7.4.1. The (re)configuration of the X server
  - 7.4.2. The connection methods to the X server
- 7.5. Starting the X Window System
  - 7.5.1. Starting X session with gdm3
  - 7.5.2. Customizing the X session (classic method)
  - 7.5.3. Customizing the X session (new method)
  - 7.5.4. Connecting a remote X client via SSH
  - 7.5.5. Secure X terminal via the Internet
- 7.6. Fonts in the X Window
  - 7.6.1. Basic fonts
  - 7.6.2. Additional fonts
  - 7.6.3. CJK fonts
- 7.7. X applications
  - 7.7.1. X office applications
  - 7.7.2. X utility applications
- 7.8. The X trivia
  - 7.8.1. Keymaps and pointer button mappings in X
  - 7.8.2. Classic X clients
  - 7.8.3. The X terminal emulator — xterm
  - 7.8.4. Running X clients as root
- 8. I18N and L10N
  - 8.1. The keyboard input
    - 8.1.1. The input method support with IBus
    - 8.1.2. An example for Japanese
    - 8.1.3. Disabling the input method
  - 8.2. The display output
  - 8.3. The locale
    - 8.3.1. Basics of encoding
    - 8.3.2. Rationale for UTF-8 locale
    - 8.3.3. The reconfiguration of the locale
    - 8.3.4. The value of the "**\$LANG**" environment variable
    - 8.3.5. Specific locale only under X Window
    - 8.3.6. Filename encoding
    - 8.3.7. Localized messages and translated documentation
    - 8.3.8. Effects of the locale
- 9. System tips
  - 9.1. The screen program
    - 9.1.1. The use scenario for screen(1)
    - 9.1.2. Key bindings for the screen command
  - 9.2. Data recording and presentation
    - 9.2.1. The log daemon
    - 9.2.2. Log analyzer

- 9.2.3. Recording the shell activities cleanly
- 9.2.4. Customized display of text data
- 9.2.5. Customized display of time and date
- 9.2.6. Colorized shell echo
- 9.2.7. Colorized commands
- 9.2.8. Recording the editor activities for complex repeats
- 9.2.9. Recording the graphic image of an X application
- 9.2.10. Recording changes in configuration files
- 9.3. Monitoring, controlling, and starting program activities
  - 9.3.1. Timing a process
  - 9.3.2. The scheduling priority
  - 9.3.3. The ps command
  - 9.3.4. The top command
  - 9.3.5. Listing files opened by a process
  - 9.3.6. Tracing program activities
  - 9.3.7. Identification of processes using files or sockets
  - 9.3.8. Repeating a command with a constant interval
  - 9.3.9. Repeating a command looping over files
  - 9.3.10. Starting a program from GUI
  - 9.3.11. Customizing program to be started
  - 9.3.12. Killing a process
  - 9.3.13. Scheduling tasks once
  - 9.3.14. Scheduling tasks regularly
  - 9.3.15. Alt-SysRq key
- 9.4. System maintenance tips
  - 9.4.1. Who is on the system?
  - 9.4.2. Warning everyone
  - 9.4.3. Hardware identification
  - 9.4.4. Hardware configuration
  - 9.4.5. System and hardware time
  - 9.4.6. The terminal configuration
  - 9.4.7. The sound infrastructure
  - 9.4.8. Disabling the screen saver
  - 9.4.9. Disabling beep sounds
  - 9.4.10. Memory usage
  - 9.4.11. System security and integrity check
- 9.5. Data storage tips
  - 9.5.1. Disk space usage
  - 9.5.2. Disk partition configuration
  - 9.5.3. Accessing partition using UUID
  - 9.5.4. LVM2

- 9.5.5. Filesystem configuration
- 9.5.6. Filesystem creation and integrity check
- 9.5.7. Optimization of filesystem by mount options
- 9.5.8. Optimization of filesystem via superblock
- 9.5.9. Optimization of hard disk
- 9.5.10. Optimization of solid state drive
- 9.5.11. Using SMART to predict hard disk failure
- 9.5.12. Specify temporary storage directory via \$TMPDIR
- 9.5.13. Expansion of usable storage space via LVM
- 9.5.14. Expansion of usable storage space by mounting another partition
- 9.5.15. Expansion of usable storage space by bind-mounting another directory
- 9.5.16. Expansion of usable storage space using symlink
- 9.5.17. Expansion of usable storage space using aufs
- 9.6. The disk image
  - 9.6.1. Making the disk image file
  - 9.6.2. Writing directly to the disk
  - 9.6.3. Mounting the disk image file
  - 9.6.4. Cleaning a disk image file
  - 9.6.5. Making the empty disk image file
  - 9.6.6. Making the ISO9660 image file
  - 9.6.7. Writing directly to the CD/DVD-R/RW
  - 9.6.8. Mounting the ISO9660 image file
- 9.7. The binary data
  - 9.7.1. Viewing and editing binary data
  - 9.7.2. Manipulating files without mounting disk
  - 9.7.3. Data redundancy
  - 9.7.4. Data file recovery and forensic analysis
  - 9.7.5. Splitting a large file into small files
  - 9.7.6. Clearing file contents
  - 9.7.7. Dummy files
  - 9.7.8. Erasing an entire hard disk
  - 9.7.9. Erasing unused area of an hard disk
  - 9.7.10. Undeleting deleted but still open files
  - 9.7.11. Searching all hardlinks
  - 9.7.12. Invisible disk space consumption
- 9.8. Data encryption tips
  - 9.8.1. Removable disk encryption with dm-crypt/LUKS
  - 9.8.2. Encrypted swap partition with dm-crypt
  - 9.8.3. Mounting encrypted disk with dm-crypt/LUKS
  - 9.8.4. Automatically encrypting files with eCryptfs

- 9.8.5. Automatically mounting eCryptfs
- 9.9. The kernel
  - 9.9.1. Linux kernel 2.6/3.x
  - 9.9.2. Kernel parameters
  - 9.9.3. Kernel headers
  - 9.9.4. Compiling the kernel and related modules
  - 9.9.5. Compiling the kernel source: Debian Kernel Team recommendation
  - 9.9.6. Hardware drivers and firmware
- 9.10. Virtualized system
  - 9.10.1. Virtualization tools
  - 9.10.2. Virtualization work flow
  - 9.10.3. Mounting the virtual disk image file
  - 9.10.4. Chroot system
  - 9.10.5. Multiple desktop systems
- 10. Data management
  - 10.1. Sharing, copying, and archiving
    - 10.1.1. Archive and compression tools
    - 10.1.2. Copy and synchronization tools
    - 10.1.3. Idioms for the archive
    - 10.1.4. Idioms for the copy
    - 10.1.5. Idioms for the selection of files
    - 10.1.6. Archive media
    - 10.1.7. Removable storage device
    - 10.1.8. Filesystem choice for sharing data
    - 10.1.9. Sharing data via network
  - 10.2. Backup and recovery
    - 10.2.1. Backup utility suites
    - 10.2.2. An example script for the system backup
    - 10.2.3. A copy script for the data backup
  - 10.3. Data security infrastructure
    - 10.3.1. Key management for GnuPG
    - 10.3.2. Using GnuPG on files
    - 10.3.3. Using GnuPG with Mutt
    - 10.3.4. Using GnuPG with Vim
    - 10.3.5. The MD5 sum
  - 10.4. Source code merge tools
    - 10.4.1. Extracting differences for source files
    - 10.4.2. Merging updates for source files
    - 10.4.3. Updating via 3-way-merge
  - 10.5. Version control systems
    - 10.5.1. Comparison of VCS commands
  - 10.6. Git
    - 10.6.1. Configuration of Git client
    - 10.6.2. Git references
    - 10.6.3. Git commands

- 10.6.4. Git for the Subversion repository
  - 10.6.5. Git for recording configuration history
- 10.7. CVS
  - 10.7.1. Configuration of CVS repository
  - 10.7.2. Local access to CVS
  - 10.7.3. Remote access to CVS with pserver
  - 10.7.4. Remote access to CVS with ssh
  - 10.7.5. Importing a new source to CVS
  - 10.7.6. File permissions in CVS repository
  - 10.7.7. Work flow of CVS
  - 10.7.8. Latest files from CVS
  - 10.7.9. Administration of CVS
  - 10.7.10. Execution bit for CVS checkout
- 10.8. Subversion
  - 10.8.1. Configuration of Subversion repository
  - 10.8.2. Access to Subversion via Apache2 server
  - 10.8.3. Local access to Subversion by group
  - 10.8.4. Remote access to Subversion via SSH
  - 10.8.5. Subversion directory structure
  - 10.8.6. Importing a new source to Subversion
  - 10.8.7. Work flow of Subversion
- 11. Data conversion
  - 11.1. Text data conversion tools
    - 11.1.1. Converting a text file with iconv
    - 11.1.2. Checking file to be UTF-8 with iconv
    - 11.1.3. Converting file names with iconv
    - 11.1.4. EOL conversion
    - 11.1.5. TAB conversion
    - 11.1.6. Editors with auto-conversion
    - 11.1.7. Plain text extraction
    - 11.1.8. Highlighting and formatting plain text data
  - 11.2. XML data
    - 11.2.1. Basic hints for XML
    - 11.2.2. XML processing
    - 11.2.3. The XML data extraction
  - 11.3. Type setting
    - 11.3.1. roff typesetting
    - 11.3.2. TeX/LaTeX
    - 11.3.3. Pretty print a manual page
    - 11.3.4. Creating a manual page
  - 11.4. Printable data
    - 11.4.1. Ghostscript
    - 11.4.2. Merge two PS or PDF files
    - 11.4.3. Printable data utilities
    - 11.4.4. Printing with CUPS
  - 11.5. The mail data conversion

- 11.5.1. Mail data basics
- 11.6. Graphic data tools
- 11.7. Miscellaneous data conversion
- 12. Programming
  - 12.1. The shell script
    - 12.1.1. POSIX shell compatibility
    - 12.1.2. Shell parameters
    - 12.1.3. Shell conditionals
    - 12.1.4. Shell loops
    - 12.1.5. The shell command-line processing sequence
    - 12.1.6. Utility programs for shell script
    - 12.1.7. Shell script dialog
    - 12.1.8. Shell script example with zenity
  - 12.2. Make
  - 12.3. C

## List of Tables

- 1.1. List of interesting text-mode program packages
- 1.2. List of informative documentation packages
- 1.3. List of usage of key directories

- 1.4. List of the first character of "**ls -l**" output
- 1.5. The numeric mode for file permissions in `chmod(1)` commands
- 1.6. The `umask` value examples
- 1.7. List of notable system-provided groups for file access
- 1.8. List of notable system provided groups for particular command executions
- 1.9. List of types of timestamps
- 1.10. List of special device files
- 1.11. The key bindings of MC
- 1.12. The reaction to the enter key in MC
- 1.13. List of shell programs
- 1.14. List of key bindings for `bash`
- 1.15. List of Unix style mouse operations
- 1.16. List of basic Unix commands
- 1.17. The 3 parts of locale value
- 1.18. List of locale recommendations
- 1.19. List of "**\$HOME**" values
- 1.20. Shell glob patterns
- 1.21. Command exit codes
- 1.22. Shell command idioms
- 1.23. Predefined file descriptors
- 1.24. Metacharacters for BRE and ERE
- 1.25. The replacement expression
- 1.26. List of script snippets for piping commands
- 2.1. List of Debian package management tools
- 2.2. List of Debian archive sites
- 2.3. List of Debian archive area
- 2.4. The relationship between suite and codename
- 2.5. List of key web site to resolving problems with a specific package
- 2.6. Basic package management operations with the commandline using `aptitude(8)` and `apt-get(8)` /`apt-cache(8)`
- 2.7. Notable command options for `aptitude(8)`
- 2.8. List of key bindings for `aptitude`
- 2.9. List of views for `aptitude`
- 2.10. The categorization of standard package views
- 2.11. List of the `aptitude` regex formula
- 2.12. The log files for package activities
- 2.13. List of advanced package management operations
- 2.14. The content of the Debian archive meta data
- 2.15. The name structure of Debian packages
- 2.16. The usable characters for each component in the Debian package names
- 2.17. The notable files created by **dpkg**
- 2.18. List of notable Pin-Priority values for `apt-pinning`

technique.

2.19. [List of the proxy tools specially for Debian archive](#)

3.1. [List of boot loaders](#)

3.2. [The meaning of GRUB parameters](#)

3.3. [List of boot utilities for the Debian system](#)

3.4. [List of runlevels and description of their usage](#)

3.5. [List of kernel error levels](#)

4.1. [3 important configuration files for pam\\_unix\(8\)](#)

4.2. [The second entry content of `"/etc/passwd"`](#)

4.3. [List of commands to manage account information](#)

4.4. [List of tools to generate password](#)

4.5. [List of notable PAM and NSS systems](#)

4.6. [List of configuration files accessed by PAM and NSS](#)

4.7. [List of insecure and secure services and ports](#)

4.8. [List of tools to provide extra security measures](#)

5.1. [List of network configuration tools](#)

5.2. [List of network address ranges](#)

5.3. [List of network connection methods and connection paths](#)

5.4. [List of network connection configurations](#)

5.5. [List of network connection acronyms](#)

5.6. [List of configuration files for the PPP connection with `pppconfig`](#)

5.7. [List of configuration files for the PPP connection with `wvdialconf`](#)

5.8. [List of configuration files for the PPPoE connection with `pppoeconf`](#)

5.9. [List of basic network configuration commands with `ifupdown`](#)

5.10. [List of stanzas in `"/etc/network/interfaces"`](#)

5.11. [List of acronyms for WLAN](#)

5.12. [List of terminology for network devices](#)

5.13. [List of advanced network configuration commands with `ifupdown`](#)

5.14. [List of environment variables passed by the `ifupdown` system](#)

5.15. [Translation table from obsolete `net-tools` commands to new `iproute2` commands](#)

5.16. [List of low level network commands](#)

5.17. [List of network optimization tools](#)

5.18. [Basic guide lines of the optimal MTU value](#)

5.19. [List of firewall tools](#)

6.1. [List of web browsers](#)

6.2. [List of browser plugin packages](#)

6.3. [List of basic mail transport agent related packages for `workstation`](#)

6.4. [List of choices for mail transport agent \(MTA\) packages in](#)

## [Debian archive](#)

- [6.5. List of important postfix manual pages](#)
- [6.6. List of mail address related configuration files](#)
- [6.7. List of basic MTA operation](#)
- [6.8. List of mail user agent \(MUA\)](#)
- [6.9. List of remote mail retrieval and forward utilities](#)
- [6.10. List of MDA with filter](#)
- [6.11. List of POP3/IMAP4 servers](#)
- [6.12. List of print servers and utilities](#)
- [6.13. List of remote access server and utilities](#)
- [6.14. List of SSH authentication protocols and methods](#)
- [6.15. List of SSH configuration files](#)
- [6.16. List of SSH client startup examples](#)
